Custom build your BAR Clutch with Hard chrome face plate and Hard chrome aloys or with Ceramic face plate and Ceramic aloys.
There are many different solutions!

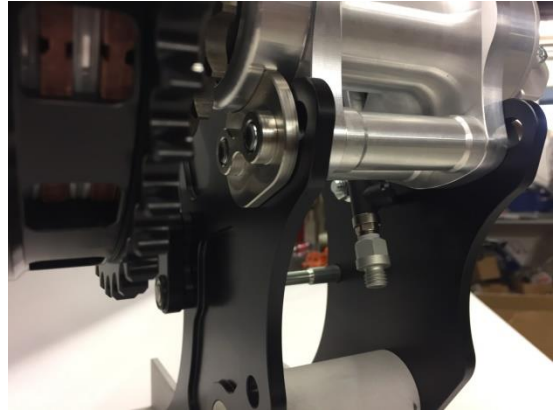

BAR Clutch basket and centerhub is hard anodized for less friction and wear. Center hubs for Speedway and Longtrack gearbox fitting

BAR Replacement sprocket
Hard anodized

BAR double Secure system

Why having mechanics running onto the track to adjust the rear chain...?
The BAR "Double secure system" is made to prevent the premier chain to go tight as the Countershaft move back when the Rear wheel are on highload at the startline. During testing and racing in the 2020 season has proven to be a big succes! "Stop the trouble - buy the Double"

The picture above is showing a number of high quality racing parts:
BAR Countershaft housing
BAR Extreme clutcharm with needle bearing
BAR Countershaft / Framebolt
BAR Double secure system

– a must have!!

BAR Engine Tuning - service and renovations

Import and sales of all original GM spare parts and engine kits.
Check out: www.bar-engineering.dk to see the GM catalogue

BAR-Engineering has a specialised tuning department, where we build new engines and service both GM 250cc and 500cc and JRM engines.

"Set-ups" is the modern saying that goes around in the Speedway world and it is not always easy to find out what you need, but BAR-Engineering is convinced that cooperation and faith between the rider and the tuner is the road to success. Speedway is a very special sport, where horsepower is not necessarily the main object, but instead engine tuning to suit the rider, his riding style and for various track conditions.

BAR-Engineering has many years of experience in speedway and in many ways will be able to help you as a tuner and as a consultant in finding the right "Set-up"

Best regards
